

Neobrutalism for Marp

THICK BORDERS. FLAT FILLS. OFFSET SHADOWS.

WHAT IS THIS

What's in the box

- Space Grotesk — bold grotesque sans-serif
- Thick 2px borders on every element
- 4px offset box-shadows, zero blur
- Near-monochromatic: black, white, and one accent
- Yellow accent (`#f5c842`) — swap it with any color

Typography

Headings are **heavy and tight**. Body text stays readable at weight 400. Inline `code` gets a bordered box. Everything is zero border-radius.

Decoration is not design. Structure is design.

Two columns

Use `<!-- _class: split -->` for side-by-side content.

- Thick border top rule
- Offset shadows on code and tables
- The accent shows up in table headers and marks

```
def brutalize(design):  
    design.border = "2px solid black"  
    design.shadow = "4px 4px 0 black"  
    design.radius = 0  
    return design
```

Dark mode

`<!-- _class: dark -->` flips to black background with white borders and white offset shadows. The accent stays yellow.

```
type Border = 'thick' | 'thicker';
```

```
const rule: Record<Border, string> = {  
  thick:    '2px solid #fff',  
  thicker: '4px solid #fff',  
};
```

Accent slide

`<!-- _class: accent -->` gives you a full yellow content slide — useful for callouts, warnings, or emphasis.

Use it sparingly. That's the whole point.

Tables

Tables get the full treatment: accent header, shadow, thick border.

PROPERTY	DEFAULT	OVERRIDE VIA
Border	2px solid #000	--nb-border-width
Shadow	4px 4px 0 #000	--nb-shadow
Accent	#f5c842	--nb-accent
Font	Space Grotesk	--nb-font
Radius	0	(don't)

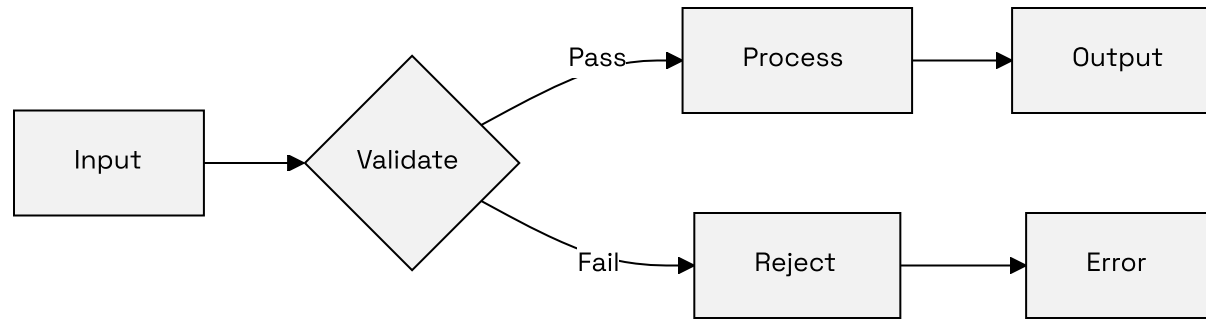

Math

Inline: $E = mc^2$. Display:

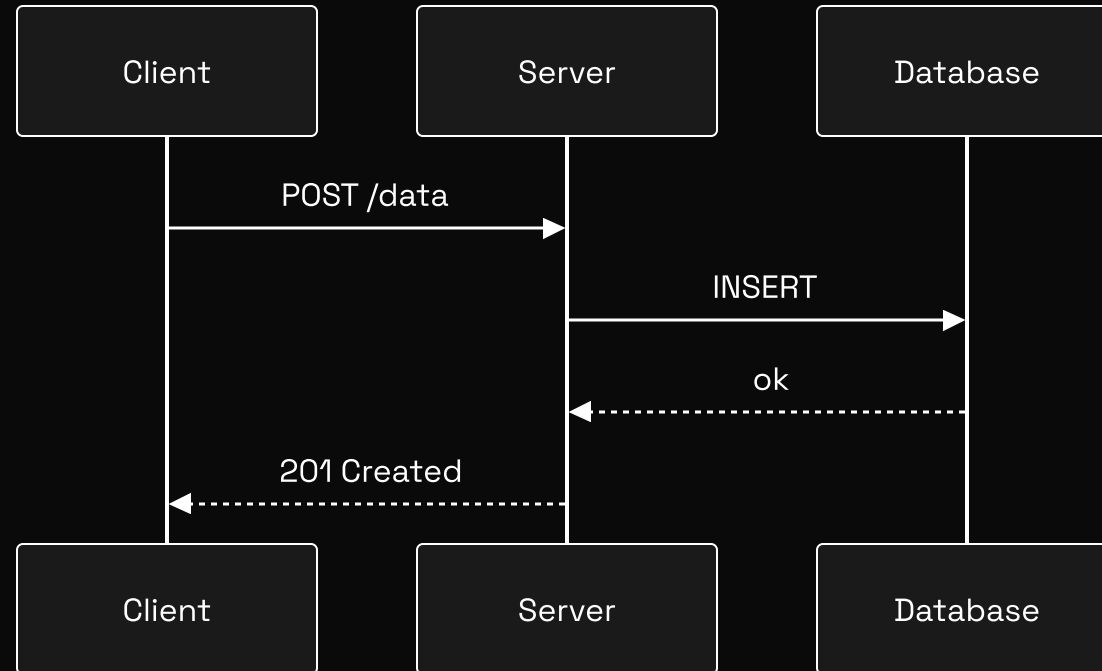

$$\sum_{k=1}^n k = \frac{n(n+1)}{2}$$

Mermaid diagrams

Diagrams use a near-monochromatic palette. Accent yellow on primary nodes, thick black borders throughout.

Mermaid on dark

Thanks
